Agentic intelligence, human control

€1.8M payroll due → convert USD to EUR

Approve?

\$500K vendor payment → withdraw Circle USYC

Approve?

AI agents continuously monitor balances, obligations, market conditions, and yield opportunities across all connected accounts.

02 Propose

The orchestration layer generates risk-scored proposed actions with full reasoning and explainability for every queued operation.

03 Approve

Human reviewers evaluate insights through role-based approval workflows. Multi-signature support for high-value operations.

04 Execute

Approved actions are executed atomically with real-time monitoring. Every step is logged to an immutable audit trail.

Modern treasury management — powered by AI

Command Center

See it in action

COMMAND CENTER

Every account, every chain, one view

Bank balances, wallet positions, yield deployments, and pending obligations rendered as a single live treasury picture. Drill into any line for full transaction history.

[COMMAND CENTER mockup placeholder]

Built for institutions

AML & Sanctions Screening

Automated anti-money laundering checks and real-time sanctions screening against OFAC, EU, and UN lists on every transaction.

Transaction Monitoring

Continuous monitoring of all on-chain and off-chain transactions. Pattern detection, velocity checks, and anomalous behavior alerting.

Audit Logging & Explainability

Immutable audit trail for every action — human and AI. Full decision provenance so you can explain exactly why any action was taken.

Role-Based Permissions

Granular RBAC with treasury manager, analyst, viewer, and admin roles. Enforce least-privilege access across your entire organization.

Approval Workflows

Configurable multi-level approval chains. High-value transactions require multiple authorized signers before execution.

Enterprise-Grade Security

End-to-end encryption, hardened infrastructure, and continuous monitoring — the security posture enterprise treasury teams expect.
